Your Best Lines of Defense Against Disease are the Facts

Every week the experts at the Centers for Disease Control report the facts on disease trends, epidemiological reports and health recommendations. Better than mere summaries, these reports (complete with charts, maps and tables) pinpoint disease trends by region. You'll know exactly what's happening in your part of the country as it occurs. No other source can offer you this fast breaking information — as it happens.

Subscribe today, and get the facts.

ORUDIS® (ketoprofen)

**STOP STOPS THE PAIN THAT STOPS YOUR PATIENTS**

Ketoprofen is a member of a class of drugs known as nonsteroidal anti-inflammatory drugs (NSAIDs). NSAIIDs are frequently used to treat pain and inflammation associated with many conditions, including arthritis and dental surgery. ORUDIS® is indicated for the relief of symptoms associated with acute and chronic rheumatoid arthritis, osteoarthritis, ankylosing spondylitis, musculoskeletal pain, and dysmenorrhea. ORUDIS® is also indicated for the treatment of osteoarthritis in patients 50 years of age or older who have failed to respond to conventional therapy.

**How ORUDIS® Works**

ORUDIS® is an NSAID that works by inhibiting the production of prostaglandins, which are chemicals that cause inflammation and pain. ORUDIS® reduces the level of these chemicals in the body, leading to a decrease in inflammation and pain.

**Uses of ORUDIS®**

- Rheumatoid Arthritis: ORUDIS® is used to treat the symptoms of rheumatoid arthritis, such as pain, swelling, and stiffness.
- Osteoarthritis: ORUDIS® is used to treat the symptoms of osteoarthritis, including pain and stiffness in joints.
- Dysmenorrhea: ORUDIS® is used to relieve the pain and cramping of menstrual cramps.

**Dosage and Administration**

- DOSE: The recommended dosage for adults and children over 12 years of age is 75 mg twice a day (every 12 hours) for the treatment of arthritis and related conditions. The dose may be increased to 150 mg twice a day if needed. The maximum daily dose of ORUDIS® is 150 mg once a day.

**Contraindications**

- ORUDIS® should not be used in patients with a known hypersensitivity to ketoprofen or other NSAIDs.

**Warnings and Precautions**

- ORUDIS® is associated with an increased risk of bleeding, particularly in the upper gastrointestinal tract. Patients with a history of bleeding or those taking medications that increase the risk of bleeding should be monitored for bleeding complications.

**Adverse Reactions**

- The most common adverse reactions associated with the use of ORUDIS® include nausea, abdominal pain, diarrhea, constipation, and headache. Other possible side effects include dizziness, drowsiness, and skin reactions.

**Interactions**

- ORUDIS® may interact with other medications, such as aspirin, warfarin, and lithium. Patients should consult their healthcare provider before taking ORUDIS® with other medications.

**Precautions**

- ORUDIS® should be used with caution in patients with a history of renal or hepatic impairment.

**Product Information**

ORUDIS® is a prescription medication. Consult your healthcare provider for more information.
