ERRATUM

Correction to "Association of Speculum Lubrication with Pain and Papanicolaou Test Accuracy"

In the abovementioned article,[1] there was an error in the Results section of the Abstract. The Results section notes that "For premenopausal women, lubricant gel use significantly reduced the pain scores of the participants ($P < .05$)." This is incorrect and it should read: "For postmenopausal women, lubricant gel use significantly reduced the pain scores of the participants ($P < .05$)." The electronic version on the *Journal of the American Board of Family Medicine* website has been corrected. We apologize for the error, and we regret any confusion or inconvenience it may have caused.
