

COMMENTARY

Communities of Solution: Partnerships for Population Health

Kim S. Griswold, MD, MPH, Sarah E. Lesko, MD, MPH, and John M. Westfall, MD, MPH, for the Folsom Group

Communities of solution (COSs) are the key principle for improving population health. The 1967 Folsom Report explains that the COS concept arose from the recognition that complex political and administrative structures often hinder problem solving by creating barriers to communication and compromise. A 2012 reexamination of the Folsom Report resurrects the idea of the COS and presents 13 grand challenges that define the critical links among community, public health, and primary care and call for ongoing demonstrations of COSs grounded in patient-centered care. In this issue, examples of COSs from around the country demonstrate core principles and propose visions of the future. Essential themes of each COS are the crossing of “jurisdictional boundaries,” community-led or -oriented initiatives, measurement of outcomes, and creating durable connections with public health. (J Am Board Fam Med 2013;26:232–238.)

Keywords: Connecting Communities: Public and Personal Health

Communities of solution (COSs) are the key principle for improving population health. The COS concept as presented in the 1967 Folsom Report¹ arose from the recognition that complex political and administrative structures often hinder problem solving by creating barriers to communication and compromise. The Folsom Report emphasized that a community’s “problem sheds” bear little relation to its political, municipal, or health care jurisdictional boundaries. Per the original Folsom Report, a problem shed was described like a watershed, that is, the contributing factors that combine to create a health care or public health problem. For example, for a spike in asthma hospitalizations, the problem shed may involve a pulp mill 20 miles away, the closure of a community health center, a cock-

roach infestation in public housing, and an outbreak of a respiratory illness. The COS would need to encompass all these factors to best be able to address the health problem. Boundaries of each community should ideally be established by “the boundaries within which a problem can be defined, dealt with, and solved.”¹

A 2012 reexamination of the Folsom Report² resurrects the idea of the COS and presents 13 grand challenges (Table 1), which define the critical links among community, public health, and primary care and call for ongoing demonstrations of COSs grounded in patient-centered care. “Defragmenting and improving the value of health care both require a system that fosters non-medical determinants of health. Here, individualized, whole patient-centered, and community-based, integrated, multi-professional based efforts can succeed where individualistic, specialty, and medical care centered systems have failed.”²

In this issue, examples of COSs from around the country demonstrate core principles and propose visions of the future. Essential themes of each COS include the crossing of “jurisdictional boundaries,” community-led or -oriented initiatives, measurement of outcomes, and creating durable connections with public health. We have

Table 1. Grand Challenges for Integrating Community Health Services

| Folsom Report Recommendations 1967 | Folsom at 50: Grand Challenges* | Funded Provisions from the American Recovery & Reinvestment Act of 2009, Children’s Health Insurance Program Reauthorization Act of 2009, and Patient Protection & Affordable Care Act of 2010 |
|---|--|--|
| A. Organization and delivery of community health services “community of solution” by relevant administrative area, not by political (city, county, state) jurisdictions | Grand challenge 1: Create a national network of community partnerships that engages and activates the citizenry to self-define <i>Communities of Solution</i> in order to develop and sustain community-tailored health programs at the local level aimed at matching local health needs with integrated health services. | PPACA: Community-based Collaborative Care Network Program; National Prevention, Health Promotion & Public Health Council, chaired by the U.S. Surgeon General, to coordinate federal prevention, wellness, and public health activities and to “elevate and coordinate prevention activities and design a focused National Prevention and Health Promotion Strategy in conjunction with communities across the country to promote the nation’s health. The Strategy will take a community health approach to prevention and well-being—identifying and prioritizing actions across government and between sectors”; Community Transformation Grants |
| B. Provision of high-quality comprehensive personal health services to all people in each community | Grand challenge 2: Foster the ongoing development of integrated comprehensive care practices (patient-centered medical homes) accessible for all groups in a community—through the creation of explicit partnerships with public health professionals and Communities of Solution. | ARRA: Increased funding for CHCs, military hospitals, Veterans Administration, Indian reservations, NHSC, and Consolidation Omnibus Budget Reconciliation Act (COBRA) subsidies CHIPRA: Coverage of additional 4.1 million children PPACA: Patient-centered medical home demonstration project within the Centers for Medicare & Medicaid Services; Medicaid parity with Medicare; increased insurance access |
| C. Every individual should have a personal physician who is the central point for integration and continuity of all medical and related services to the patient | Grand challenge 3: Provide every individual in the United States the opportunity to form a partnership with a personal physician and a team of health professionals utilizing integrated community health services in Communities of Solution. | ARRA: Funding for wellness and prevention CHIPRA: Funding for outreach, translation, interpretation; demonstrations to combat obesity PPACA: Preventive health care coverage mandate; \$250 million Prevention and Public Health Fund to community programs (including National Healthy Weight Collaborative); interagency council headed by surgeon general with focus on prevention and public health |
| D. Prospective planning and management of comprehensive environmental health services; includes water, air, food, hygienic housing, activity, and recreation | Grand challenge 4: Engage individuals in Communities of Solution in the creation of healthy environments, eliminating existing barriers to community-tailored strategies; and endorse and implement a global conception of environmental health encompassing all physical, chemical, and biological factors external to a person that can potentially affect health. | PPACA: Community Preventive Services Task Force |

Table 1. Continued

| | | |
|--|--|--|
| E. Ensure control of water and air pollution, biological and chemical product safety, radioactive material safety | Grand challenge 5: Engage Communities of Solution to recognize and address injuries as a main preventable source of global human death and disability—especially for children. | |
| F. Accident prevention: <ul style="list-style-type: none"> • State health departments should develop accident prevention programs. • U.S. Public Health Service should establish a national accident prevention, research, training, service, and information facility analogous to the present communicable disease center. | | |
| G. Family planning should be an integral part of community health services | Grand challenge 6: Sustain and improve family planning as an integral part of community health services. | PPACA: State eligibility option for family planning services |
| H. Coordinate land use, transportation, economic development, and city planning to provide most effective and space use for urban populations | Grand challenge 7: Engage with community partnerships to coordinate with municipal authorities to design and build healthy living environments. | PPACA: Community Preventive Services Task Force |
| I. Education for health: <ul style="list-style-type: none"> • The community has a responsibility for developing an organized and continuing education concerning health resources for its residents. • Each individual has a personal responsibility for making full use of available health resources. | Grand challenge 8: Enhance health literacy to empower individuals within Communities of Solution to be active participants in promoting their own health and the health of their communities. | PPACA: Health care quality improvement programs; health care delivery system research; funding available for health literacy research |
| J. Health manpower: effective utilization of available health personnel will reduce the current manpower shortage, and continuous evaluation of the use of manpower, accompanied by necessary changes and retraining, will provide additional manpower for existing new health services | Grand challenge 9: Create a health workforce to serve the needs of U.S. communities. | ARRA: NHSC expansion PPACA: Teaching health centers; Primary Care Extension Service; revisions to GME to favor nonhospital training; national healthcare workforce commission to align federal workforce resources with needs; preference of primary care for reallocation of unused graduate medical education slots |
| K. Hospital care: further increases in hospital costs must not be accepted complacently, but that a wide range of vigorous and persistent actions must be taken by all parties concerned to moderate the costs of hospital care without adverse effects on quality | Grand challenge 10: Integrate health services—aligning hospital, ambulatory, and community care—across settings to promote quality and create value. | PPACA: Establishment of accountable care organization pilots to manage patient populations comprehensively across settings |
| L. Every state should have a single, strong, well-financed, professionally staffed, official health agency with sufficient authority and funds to carry out its responsibilities/ assure every community of coverage by an official health agency and access to a complete range of community health services | Grand challenge 11: Transform the roles of the relevant federal, state, and local agencies by bridging public health and medicine to be effective partners in communities of solution. | PPACA: Research on optimizing the delivery of public health services; Prevention and Public Health Fund Title IV, Prevention of Chronic Diseases and Improving Public Health |
| M. Voluntary citizen participation: a central factor in the growth and development of ... personal and community health has been the participation of individuals and voluntary associations through dedicated leadership, financial support, and personal service | Grand challenge 12: Engage and support a citizen volunteer network formed by Communities of Solutions to educate, motivate and collaborate for strategic local, regional, and national resource allocation informed by credible and actionable data. | |

Table 1. Continued

| | | |
|--|---|---|
| N. Action planning for community health services: planning is an action process and is basic to development and maintenance of quality community health services | Grand challenge 13: Utilize health information technology and emerging data-sharing innovative networks that enable the flow of relevant knowledge (public health, environmental, educational, legal, etc.) to the Communities of Solution. | ARRA: Beacon Community Cooperative Agreement Program PPACA: National Prevention, Health Promotion & Public Health Council (see above); implementation of activities to improve patient safety and reduce medical errors through the appropriate use of best clinical practices, evidence-based medicine, and health information technology |
|--|---|---|

*The grand challenges address each of the major recommendations from “Health is a Community Affair” and overlapping provisions from recent legislation.

CHC, community health centers; GME, graduate medical education; NHSC, National Health Service Corps.

linked each article with the respective grand challenge(s) that are addressed.

Engaging Stakeholders: Crossing Boundaries

In “Advanced Primary Care in San Antonio,” Ferrer et al³ utilize health promotion *promotores* to create relationships with patients in the community, and they engage city planners to map community resources and community partners for each patient’s neighborhood and thereby tap into community resources to maximize health (grand challenges 2, 7, 8, and 10, presented in Table 1). The essential tracking of health outcomes, although early, is an essential piece of the COS. The Brazos Valley Health Partnership COS involves the establishment of “one-stop shops” that provide patients with services ranging from health care to Senior Meals to legal aid. Because of the difficulty accessing services experienced by these rural community members, Garney et al⁴ explain that “county boundaries are irrelevant with regard to social and health issues that residents face” (grand challenges 2, 4, 8, 10, and 11). This COS reveals the importance of involving numerous sectors of the community, including community-based organizations, governmental leaders, and health care providers (Figure 1).

In “Boot Camp Translation” the High Plains Research Network⁵ describes the process for identifying health problems and then building a COS to translate the best medical evidence into locally relevant and actionable projects. The High Plains Research Network brings together patients, community members, health care pro-

viders, public health agencies, and community-based organizations to address the important health issues of their populations. This process relies on the expertise of everyone, in both academia and the community, to develop a local solution (grand challenges 2, 4, 8, 9, 10, 12).

Lagom

Lennon et al.⁶ present a military health system COS for medical education, health care delivery, and public health. This article highlights the relative ease of creating meaningful COSs in the cohesive military communication structure. The authors also propose a compelling definition for the correct size of a COS: *lagom*—“while there is no direct English translation, *lagom* essentially means ‘just the right amount’.... The local COS is an organic entity that will expand and contract in scope until it reaches the right size for the patient community it serves, as measured by the outcomes it chooses to achieve”⁶ (grand challenges 2, 8, 9, 10, and 13). In contrast, the OCHIN Community Information Network⁷ identifies “problem sheds through surveillance of network-wide data” by facilitating locally relevant data sharing among public health partners, community health stakeholders, informatics, and policy. This place-based data component of a COS, although on its face less relationship-based, also enables understanding and outcomes measurement of any identified community health problem (grand challenges 1, 10, 11, and 13).

COSs are indispensable to the mitigation of health disparities because of social determinants of health. A collaboration between the Jefferson Department of Family and Community Medicine

Figure 1. Example of a community of solution to address a specific problem shed. and Pathways to Housing-PA creates a jurisdiction crossing *lagom* COS for a homeless and mentally ill population (grand challenges 2, 3, 9, and 10). Weinstein et al⁸ highlight the current reality that many of these COS roles are “not about to be reimbursed under current insurance mechanisms.” This program provides evidence for the ongoing relevance and breadth of the Folsom Report and the COS framework in addressing the needs of individuals and communities.

Rural and Urban *Lagom*

In “HeartBeat Connections” (grand challenges 4, 7, 11, 12, and 13), Benson et al⁹ describe a rural program using participatory methods. Recogniz-

ing “common barriers to clinical CVD prevention (eg, lack of time and lack of patient follow-up),”⁹ the project utilizes a multidisciplinary team for counseling and medication management through telephone outreach. Participants also are linked “to other resources within the community (eg, weight management classes, fitness facilities, and farmers’ markets), thereby integrating medicine and public health.”⁹

Sanders et al¹⁰ focus on social determinants of health through their inner-city chronic disease management program with “nurse-led teams using protocol-driven clinical decision-making situated in 2 neighborhood food pantries” to focus on hypertension, hyperlipidemia, and diabetes (grand

challenges 4, 7, 8, 12, and 13). Their Milwaukee model incorporates a network formed by volunteers, community health workers, local parishes, and strong faith-based connections. In a wider community focus, Baird Kanaan¹¹ describes the Healthy Mendocino COS as a “broad-based coalition” consisting of 20 community stakeholders with pooled funding to launch a web-based tool that will enhance the quality and utility of data for improving local health (grand challenges 7, 8, 11, 12, and 13).

These 3 examples focus on specific community problem sheds: urban, rural, and community wide, emphasizing the utility of Figure 1.

COS: Back to the Future

Can the U.S. public school system serve as a roadmap for health system reforms? (grand challenges 1–13) DeVoe and Gold¹² pose this question in a future-forward essay exploring how a neighborhood-based COS might use community health centers, public health outreach, information technology, and citizen-driven district health boards to deliver coordinated, efficient care.

Influences of the Pharmaceutical Industry

Two final articles discuss the influence of the pharmaceutical industry and the impact of physician disclosure under health care reform—the “Sunshine laws.” In “Physician Payment Disclosure Under Healthcare Reform: Will the Sun Shine?” (grand challenges 8, 10, 11, and 13), Mackey and Liang¹³ illustrate the intent of regulation efforts to control pharmaceutical costs and mitigate conflicts of interests for providers. Evans et al¹⁴ (grand challenges 10, 12, and 13) have an answer to the pharma dilemma: engage in a pharma-free practice redesign. Their clinic transformation includes consensus agreement by clinical and front office staff, detailed cost data on drug samples, and monitoring of pharma visits, all done as part of a quality improvement initiative.

The Payer Conundrum

It is interesting that none of the articles presented include a defined role for insurance companies within the COS; ideally payment would be a powerful incentive to create effective problem-solving structures for problem sheds. However, coverage guidelines from insurance stakeholders may con-

fuse patients about whether the clinician or the insurance provider is actually making care decisions, which creates an inherent conflict within a COS. We believe that payers will become involved in development and support of COSs because their patients derive benefit from living and working in a community that values healthy living. Could an effective accountable care organization actually be a COS with payers included? We hope that visionary payers will accept the grand challenges of the Folsom legacy and begin immediately supporting the development of true COSs in their neighborhoods, catchment areas, and states.

Folsom Forward

These articles illustrate exciting opportunities and COS models and highlight persistent health disparities that plague our nation. COSs may be crucial steps toward addressing social determinants of health. Positive change is anchored to sustainable community approaches that link public health and primary care in explicit partnerships to address the needs of the individual and community. Together, when we build a COS, an environment and a neighborhood that supports healthy living, we contribute to the health of the whole population.
