ERRATA

Correction to “Does the ‘Office Nurse’ Level of Training Matter in the Family Medicine Office?”

In the above-mentioned article,¹ In Table 3, Patient Satisfaction Scores, for the Inclusion of obstetrics–Included row under column 1 (Group), the value of the adjusted odds ratio in column 4 should be 1.56, not 1.00. The confidence interval of 1.27–1.93 is correct as published. The electronic version on the Journal of the American Board of Family Medicine website has been corrected. We apologize for the error, and we regret any confusion or inconvenience it may have caused.

Correction to “Satisfaction of Family Physicians Working in Community Health Centers”

In the above-mentioned article,¹ there is an error in the results section of the abstract. The proportions of family physicians highly satisfied with their employers is reported as 32% versus 39%, but it should be the same as what is reported in Table 3 (62% vs 72%). The electronic version on the Journal of the American Board of Family Medicine website has been corrected. We apologize for the error, and we regret any confusion or inconvenience it may have caused.
