You’re looking at the answer to your recruitment problems!

It’s the Journal of the American Board of Family Practice. Where you reach the best job candidates. More of them. More often. To find out more, just contact Classified Advertising at (617) 893-3800.

The Journal of the American Board of Family Practice
Are you prepared to deal with the medical/legal complexities of modern health care?

It would be difficult to find a better guide to this complicated and controversial topic than William J. Curran's, *Law-Medicine Notes: Progress in Medicolegal Relations*.

As one of the nation's foremost medico-legal authorities, he has been instrumental in shaping almost every medical/legal issue of the last twenty-five years, from the right to die to standards for committing mental patients.

Now, in this annotated collection of essays drawn from his column in the *New England Journal of Medicine*, Curran gives us a unique opportunity to explore the complexities of the medical/legal relationship.

*Law-Medicine Notes: Progress in Medicolegal Relations*
William J. Curran

Collected and annotated, with a preface by Arnold S. Relman, M.D., and an Introduction by the author. 450 pages. Softcover. $38.50.

Chapter 1: Medical malpractice  Good Samaritan laws... peer-review programs... informed consent... clinical experimentation... diagnostic errors.

Chapter 2: Hospitals: the new legal doctrines  Liability for quality of care... malpractice arbitration... conditional medical treatment... cost-containment.

Chapter 3: Forensic medicine and the law  Scientific evidence and the courts... damage suits... personal-injury law and lawyers... mass disasters.

Chapter 4: Insanity, psychiatry, and the armor of the law  Proof of mental illness for commitment... confidentiality in psychiatric practice... competency of the mentally retarded.

Chapter 5: Ethics in medical practice  Compulsory drug testing... confidentiality in epidemiologic investigations... care for the dying... the patient's bill of rights.

Chapter 6: Legal/moral problems in human reproduction  Birth control and privacy... abortion law... sterilization of the poor... fetal research... the thalidomide tragedy.

Chapter 7: Life and death  The uniform anatomical gift act... birth death... legal and medical death... brain death statutes... the right to die.

Please send me ________ copies of William J. Curran's, *Law-Medicine Notes: Progress in Medicolegal Relations*.

$38.50 each (Massachusetts residents add 5% sales tax.)

Plus $2.50 postage and handling per copy

Help reduce breast cancer deaths by at least **25** percent . . .

Refer your female patients for regular screening mammograms

Twelve major medical organizations recommend that asymptomatic women ages 40-49 should have a screening mammogram every 1-2 years, and a physician’s examination every year. Asymptomatic women 50 and older should have a mammogram and a physician’s exam every year.

Scientists estimate that if women followed these guidelines, breast cancer deaths would **decline** by at least **25** percent.
Read *Journal Watch*. It's the fastest way to keep up with what's new in medical literature. Every two weeks *Journal Watch* gives you eight pages of clear, concise summaries of the latest advances published in over 20 major journals. All written by doctors—for doctors.

From the *New England Journal of Medicine*, *Lancet* and *Journal of Infectious Diseases* to *Pediatrics* and *Science*, *Journal Watch* keeps you up to date with what you need to know to provide the best patient care possible. And because every article in *Journal Watch* is clearly referenced, it's easy to go right to the source to get more information.

*Journal Watch*. From the publishers of the...
CARE plants the most wonderful seeds on earth.

Seeds of self-sufficiency that help starving people become healthy, productive people.
And we do it village by village by village.
Please help us turn cries for help into the laughter of hope.

1-800-521-CARE
Drug Interactions: Catecholamine-depleting drugs may have additive effects when given with β-blockers. Observant patients treated with both agents closely together may experience signs of bradycardia or hypotension. Although cardiac failure rarely occurs immediately after administration of such agents (e.g., Catecholamine-depleting drugs), it may potentiate insulin-induced hypoglycemia. Adriamycin or daunorubicin may potentiate the cardiodepressive effects of β-blockers. Catecholamine-depleting drugs may blunt antihypertensive effects of β-blockers.

Cardiac Failure, Malignant Hypertension: Chronic cardiac insufficiency in patients treated for 3 months (N = 63) and 1 year (N = 71) after treatment with beta-blockers. Although cardiac failure rarely occurs immediately after administration of such agents (e.g., Catecholamine-depleting drugs), it may potentiate insulin-induced hypoglycemia. Adriamycin or daunorubicin may potentiate the cardiodepressive effects of β-blockers. Catecholamine-depleting drugs may blunt antihypertensive effects of β-blockers.

Pregnancy: Teratogenic Effects: Pregnancy Category B. No teratogenic effects were seen in rat or rabbit reproduction studies utilizing SECTRAL doses that were, respectively, approximately 3.5 and 8 times the maximum recommended human dose. At the dose in the rabbit, slight fetal growth retardation was noted; this was considered to be a result of maternal toxicity (evidenced by reduced food intake, lowered pregnancy and death rates). Brains and kidney weights were not significantly increased. Although cardiac failure rarely occurs immediately after administration of such agents (e.g., Catecholamine-depleting drugs), it may potentiate insulin-induced hypoglycemia. Adriamycin or daunorubicin may potentiate the cardiodepressive effects of β-blockers. Catecholamine-depleting drugs may blunt antihypertensive effects of β-blockers.

ABSORPTION: Catecholamine-depleting drugs may have additive effects when given with β-blockers. Observant patients treated with both agents closely together may experience signs of bradycardia or hypotension. Although cardiac failure rarely occurs immediately after administration of such agents (e.g., Catecholamine-depleting drugs), it may potentiate insulin-induced hypoglycemia. Adriamycin or daunorubicin may potentiate the cardiodepressive effects of β-blockers. Catecholamine-depleting drugs may blunt antihypertensive effects of β-blockers.

Cardiac Failure, Malignant Hypertension: Chronic cardiac insufficiency in patients treated for 3 months (N = 63) and 1 year (N = 71) after treatment with beta-blockers. Although cardiac failure rarely occurs immediately after administration of such agents (e.g., Catecholamine-depleting drugs), it may potentiate insulin-induced hypoglycemia. Adriamycin or daunorubicin may potentiate the cardiodepressive effects of β-blockers. Catecholamine-depleting drugs may blunt antihypertensive effects of β-blockers.
