Classified Advertising

Classified advertising orders, correspondence and payments should be directed to: JA/FP, Classified Advertising, 1440 Main Street, Waltham, MA 02154.

Classified advertisements placed with JA/FP are restricted to physician recruitment, faculty positions, CME courses/seminars, and practices for sale. All ads must relate to the medical field and are subject to approval.

Please refer to the schedule below for closing dates. Classified rate is $1.40 per word (minimum charge of $75.00 per ad insertion) and $95.00 per column inch for classified display ads. Payment in full is required with all classified advertising. We accept American Express, Visa, or MasterCard. Confidential reply boxes are an additional $10.00 per insertion. Responses are sent directly every Tuesday and Thursday and the box will remain open for three months.

All advertisements for employment must be non-discriminatory and comply with all applicable laws and regulations. Ads that discriminate against applicants based on sex, age, race, religion, marital status or physical handicap will not be accepted.

NOTE: Our classified advertisements are all set in the same typeface and format. All ads are highlighted by geographic territory.

For more information please call (617) 893-6991 (outside MA). (617) 893-3800 (in MA). Fax # (617) 893-5003.

FAMILY PRACTICE - Faculty Development Fellowships in Academic Medicine at the University of Minnesota. The Department of Family Practice and Community Health, Medical School, University of Minnesota, invites applicants for two-year, full-time faculty fellowship programs. The Fellowship in Academic Medicine and Clinical Investigation is designed to develop full-time family physician faculty and offers opportunities in academic teaching, research, and administration, combined with opportunities for acculturation to an academic milieu and continuing development of clinical skills. The Geriatrics Fellowship Program prepares individuals for leadership in academic geriatric medicine and offers a wide variety of opportunities for clinical and academic training and research involvement. Both Fellowships offer the opportunity to earn an additional degree (e.g., NHH). Qualifications include Minnesota licensure eligibility, ABFP/AABM Certification or eligibility as practicing physician, evidence of professional goals and values consistent with a full-time career in Academic Medicine. Fellowship awards begin on July 1, 1993 with annual stipend of $38,000 and tuition. For additional information and application materials, contact: Edward W. Critchley, M.D., Professor and Head, Department of Family Practice and Community Health, University of Minnesota Medical School, Box 381 UMC, Minneapolis, Minnesota 55455. Please specify the program(s) in which you are interested. The University of Minnesota is an equal opportunity educator and employer.

PACIFIC

MEDICAL USES OF STATISTICS
SECOND EDITION
John C. Bailar III, M.D., Ph.D.,
McGill University;
and Frederick Mosteller, Ph.D.,
Harvard School of Public Health; with 32
distinguished contributors

SECOND EDITION!
A Practical Approach to Statistics
Can you evaluate the validity of published studies?
Do you know when and why to use certain statistical techniques?
Bailar & Mosteller provide you with the expert guidance you need.
If you've been looking for an overview of medical statistics that's understandable, easy to apply, and up-to-date, order your own copy today!

©1992, 480 pages, 90 illus., paperback
ISBN 0-910133-36-0

Contents: Revised & Updated — Plus 7 New Chapters
- Broad Concepts and Analytical Techniques
  The basic principles behind statistical techniques with a new chapter on uses of statistical thinking.
- Design
  The strengths and weaknesses in current research design.
- Analysis
  How to evaluate statistical tools—with new chapters on decision analysis, statistical analysis of survival data, and contingency tables in medical studies.
- Communicating Results
  How to present the data clearly—plus new guidelines for statistical reporting in medical journals.
- Reviews and Meta-studies
  How to appraise research and analyze data combined from several studies. Plus new chapters on medical technology assessment and an update of the quality and methodology of meta-analysis.

☐ YES, send me a copy of the new Second Edition of Medical Uses of Statistics for my risk-free trial.
☐ Check enclosed for $39.95,* plus $3.50 postage and handling. (Make check payable to NEJM Books)
  (*Massachusetts Residents add 5% sales tax.)
☐ Charge my ☐ VISA ☐ MasterCard ☐ AmEx

Optimal dose

Information for patients suspected of myocardial depression during general anesthesia. Exercise caution and observe patients closely for myocardial depression during anesthesia.

In patients with aortic or mitral valve disease or restricted left ventricular function, continued depression of the myocardial contractile force is known to occur during beta-adrenergic blockade. Upright (sedentary) patients may be more resistant to this effect than do lying patients. Beta-adrenergic blockade may precipitate more severe failure. Although beta-blocker therapy has been shown to improve survival in patients with congestive heart failure, beta-blockers do not improve survival in patients who have overt heart failure at the time treatment is initiated; in patients with asymptomatic or mild heart failure, beta-blockers may provide significant morbidity reduction.

Peripheral Vascular Disease: Beta-antagonists reduce vasomotor output and can precipitate, aggravate, or exacerbate arterial insufficiency in patients with peripheral or mesenteric vascular disease. Exercise caution and observe such patients closely for the development of claudication. Beta-adrenergic blockade may be advisable in patients with peripheral vascular disease who are being treated with vasodilators of other type.

Bromoclonidine: Patients with bromoclonidine should, in general, not receive a beta-blocker. Because of its relative beta 1-selectivity, low doses of SECTRAL may be used cautiously in such patients who do not respond to, or cannot tolerate, alternative treatment. Since beta 1-selectivity is not absolute and does exist in other possible beta-blockers, use lowest possible dose of SECTRAL initially, preferably in divided doses.

Diabetes and Hypoglycemia: If beta-blockers are given to diabetic patients, precautions should be taken to prevent hypoglycemia because of the potentiation of insulin-produced hypoglycemia.

Thyrotoxicosis: Beta-blockers may potentiate the effects of thyroidectomy or radioiodine therapy on glandular function.

PRECAUTIONS: Impaired Renal or Hepatic Function: While there are no U.S. studies, foreign published experience shows that SECTRAL has been used safely in patients with impaired renal or hepatic function. Use caution to avoid hypoglycemia and hypotension, particularly in diabetic patients. Caution should be exercised in patients with impaired renal function. No adverse effect has been reported in hepatically impaired patients.

Information for Patients: A dose-dependent increase in the development of positron emission tomography (PET) scans has been noted when SECTRAL is administered to patients with myocardial infarction. PET scans have been used to evaluate the extent of myocardial infarction, and PET images have been used to assess the extent of myocardial salvage after reperfusion therapy.
