From the publisher of the first clinical studies on AIDS comes the latest reprint collection on this important topic.

In the coming years, you and thousands of physicians like you will be providing—often for the first time—primary care for AIDS patients. AIDS: Epidemiologic and Clinical Studies, Volume II can help you diagnose, evaluate and treat these patients.

This second volume in the Reprint Collection Series includes 63 original articles, published from February 1987 to February 1989, in The New England Journal of Medicine. These articles, along with editorial, correspondence and critical responses from practitioners in the field, provide a unique perspective for clinical understanding of Acquired Immunodeficiency Syndrome, its cause, characteristics, treatment, and public health implications.

Articles of particular interest:

- A study of the prevalence of HIV in teenagers and young adults.
- New retrovirus, HIV-2, and the need for seroepidemiologic surveillance.
- Methods of diagnosing opportunistic infections.
- Clinical therapy trials of the drug azidothymidine (AZT).

Please send me _____ copies of AIDS: Epidemiologic and Clinical Studies, Volume II.

- Hardcover, 440 pages, ISBN 0-910133-29-8 for $45.00* + $3.50 postage and handling per copy.
- Paperbound, 440 pages, ISBN 0-910133-25-5 for $35.00* + $2.75 postage and handling per copy.

The New England Journal of Medicine
NEW!
MEDICAL USES OF STATISTICS
SECOND EDITION
John C. Bailar III, M.D., Ph.D.,
McGill University;
and Frederick Mosteller, Ph.D.,
Harvard School of Public
Health; with 32
distinguished contributors

SECOND EDITION!
A Practical Approach to Statistics
Can you evaluate the validity of published studies?
Do you know when and why to use certain statistical techniques?
Bailar & Mosteller provide you with the expert guidance you need.
If you’ve been looking for an overview of medical statistics that’s understandable, easy to apply, and up-to-date, order your own copy today!

Contents: Revised & Updated — Plus 7 New Chapters
- Broad Concepts and Analytical Techniques
  The basic principles behind statistical techniques with a new chapter on uses of statistical thinking.
- Design
  The strengths and weaknesses in current research design.
- Analysis
  How to evaluate statistical tools—with new chapters on decision analysis, statistical analysis of survival data, and contingency tables in medical studies.
- Communicating Results
  How to present the data clearly—plus new guidelines for statistical reporting in medical journals.
- Reviews and Meta-studies
  How to appraise research and analyze data combined from several studies. Plus new chapters on medical technology assessment and an update of the quality and methodology of meta-analysis.

YES, send me a copy of the new Second Edition of Medical Uses of Statistics for my risk-free trial.
Check enclosed for $39.95,* plus $3.50 postage and handling. (Make check payable to NEJM Books)

Drug interactions: Catecholamine-depleting drugs may have additive effects when given with beta-blockers. Observe patients treated with both agents closely for evidence of marked bradycardia or hypotension which may present as vertigo, syncope, pseudofaint, or orthostatic in blood pressure without concurrent increase in heart rate. Tachycardia. Exaggerated hypertensive responses have been reported from use of beta-blockers in combination with sympathomimetics, including those in OTC cold remedies and vasconstrictor nasal chlors. Nonsteroidal anti-inflammatory drugs may blunt antihypertensive effects of beta-blockers.

Contraindications, Mutagenesis, Pregnancy, and Fertility: Chronic oral toxicity studies in rats and mice, at doses 15 times the maximum recommended (60 kg, human dose), did not indicate carcinogenic potential for SECTRAL. Diacetolol, the major metabolite in the rat, was not carcinogenic in rats treated continuously to 2 years. SECTRAL and diacetolol also had no mutagenic potential in the Ames Test. No significant impact on reproductive performance or fertility was found in rats following SECTRAL administration at 100 mg/kg diacetolol doses of up to 240 mg/kg, respectively. Pregnancy: Teratogenic Effects: Pregnancy Category B: No teratogenic effects were seen in rat or rabbit reproduction studies utilizing SECTRAL doses that were, respectively, approximately 315 and 6.8 times the maximum recommended human dose. At this dose in the rabbit, slight fetal growth retardation was noted; this was considered to be a result of maternal toxicity (evidenced by reduced food intake, lowered body weight gain, mortality). Diacetolol studies (doses up to 450 mg/kg/d in rabbits and up to 1800 mg/kg/d in rats) showed no evidence of fetal harm other than a significant elevation in postimplantation loss with 450 mg/kg/d, a level at which food consumption and body weight gain were reduced in rabbit dams, there was a nonstatistically significant increase in incidence of bilateral cataract in rat fetuses from dams treated with 1800 mg/kg/d. There are no adequate and well-controlled trials in pregnant women; SECTRAL should be used during pregnancy only if potential benefit justifies risk to the fetus.

Nonteratogenic Effects: Human studies indicate that acebutolol and diacetolol cross the placenta. Neonates of mothers who received acebutolol during pregnancy have reduced birth weight, decreased blood pressure, and decreased heart rate. Labor and Delivery: Effect on labor and delivery in pregnant women is unknown. Anesthesiology: There have shown no effect of SECTRAL on the usual course of labor and delivery.

Nursing Mothers: Acebutolol and diacetolol appear in breast milk (milk: plasma ratio of 1.7:12.2, respectively, at 12.2 mg/kg/d). Use with caution in nursing women. Pediatric Use: Safety and effectiveness in children have not been established. ADVERSE REACTIONS: SECTRAL is well tolerated in properly selected patients. Most adverse effects have been mild, nonthreatening, and reversible. Tapering, and tendency to decrease as treatment duration increases.

The incidence of treatment-related side effects (volunteered and elicited) derived from placebo-controlled clinical trials in patients with hypertension, angina pectoris, and/or cardiac insufficiency is as follows. Numbers represent percentage incidence for SECTRAL (N = 1002) versus placebo (N = 314), respectively.

CNS: Drowsiness and sedation 2% 1%, dizziness 2% 1%, fatigue 2% 1%, headache 4% 2%, insomnia 3% 1%, abnormal dreams 3% 1%, dermatologic rash 2% 1%, constipation 4% 0%, diarrhea 2% 1%, flatulence 3% 1%, nausea 4% 1%, vomiting 4% 1%, rash 2% 1%, pruritus 2% 1%, pyrexia 2% 0%, respiratory: cough, sneezing 3% 0%, rhinitis 2% 1%, sinusitis 2% 1%. Myocardial infarction and death have been reported. Although rarely, rechallenge. Abnormalities in changes in blood pressure without concomitantly. Insulinotropism, hypoglycemia. Special Senses: conjunctivitis, dry, eye, dry eye. Autoimmune: extremely rare reports of systemic lupus. Insulinotropism, hypoglycemia. Special Senses: conjunctivitis, dry, eye, dry eye. Autoimmune: extremely rare reports of systemic lupus. Insulinotropism, hypoglycemia. Special Senses: conjunctivitis, dry, eye, dry eye. Autoimmune: extremely rare reports of systemic lupus. Insulinotropism, hypoglycemia. Special Senses: conjunctivitis, dry, eye, dry eye. Autoimmune: extremely rare reports of systemic lupus.
