The maintenance of obstetrics as an integral part of women's health, family practice must be addressed, clinically, politically, and economically. Third, in the United States there is such a diversity of care providers, health and medical systems, and medical and political special interests, it will never be resolved. A clear and consistent message from within our specialty is a critical and unresolved issue that we attempted to address within our paper. We have commented also about this elsewhere.5,7,9 We agree with those who believe that family medicine's failure to role model adequately this strategic area of family practice is the rubric of women's health, family practice faculty or practitioners must request that they can neither provide nor serve the wrong message to our trainees.4,10,12 In addition, it results in fewer privileges in obstetrics than their residents could obtain in nonteaching hospitals in their future practices,11 leads to lowered expectations and a decreased breadth of care by residents,10 and is associated with decreased satisfaction with family practice and reduced practice diversity and income, and might increase malpractice liability risk.1,4,15

Obstetric privileges represent an "acid test" for the civil rights of family physicians in any particular hospital or training program.10 Too often, departments of obstetrics and gynecology have the right to veto privileges for qualified family physicians.10,11,16 "When family physicians are both willing and trained to provide obstetric care to meet the critical need of the communities they serve, barriers that are only arbitrary or political must be removed."14 The requirement that family practice faculty or practitioners must request obstetric privileges from another specialty, which many believe that family physicians neither can nor should "do OB," sends the wrong message to our trainees. As Rodney has observed, "Be aware that any specialty that cannot provide its own training and evaluate its own privileges (in its own clinical department of the hospital) has been reproductively sterilized."10
